

### Operations Technical Specialist

Founded in 1987, Metrol are global leaders in the innovation, development and operation of wireless down-hole systems, using acoustic, electromagnetic and inductive telemetry.

Metrol's understanding of this technology and its application plays a major part in our success. Our products are already used by energy companies throughout the world during exploration and production, where the data and control provided allows significant advances in efficiency and safety. Metrol's commitment to research and development has ensured that the company stays at the forefront of downhole communications and the successful introduction of a range of new products has resulted in company growth which provides an opportunity for skilled and innovative engineers.

We are located in the Kirkhill Industrial Estate in Dyce, but operations are global, and we have offices in Dubai, the United States and other worldwide locations.

With a family business culture, we aim to create and provide a working environment that promotes from within, encourages training and development and allows and trusts individuals to maintain a work-life balance.

#### **Benefits:**

The role comes with a competitive salary and benefits package including:

- Culture that promotes teamwork and empowering individuals to make a difference
- Challenging role with on-the-job training, working as part of an expert team
- 33 days holiday with additional holidays for long service and long service awards
- Hybrid/Flexible working opportunities
- Company Pension contributions
- Private Healthcare and Life Insurance
- Cycle to work scheme

#### **The Role:**

As part of our ongoing growth, we are actively recruiting an Operations Technical Specialist to support the world-wide Operations team. The successful candidates will be responsible for the technical planning, job configuration and execution of our jobs.

#### **Main Duties:**

- Interpret downhole well models and advise on tool placements for optimum system performance to meet client requirements.
- Review and understand well construction to ensure models are representative.
- Create system configurations and schedules (such as wireless system configuration)
- Ensure tool assemblies are configured to meet job requirements.
- Provide data estimations to Operations and Sales teams.
- Collate and analyse system performance diagnostics data for system optimisation and R&D purposes.
- Provide technical support to workshops and field operations across multiple product lines.
- Create step by step procedure for complex operations to be conducted in the field.

Occasional periods of work may also be required at onshore and offshore locations worldwide.

### Required Skills & Experience:

- Appropriate engineering or science degree
- Good working knowledge of the oil industry, well construction and Metrol's tools.
- Has run offshore tools or at the very least a very good awareness of the processes involved.
- Good at learning new software programs and how to operate them.
- Proficient in Excel and data handling.
- Strong troubleshooting skills and ability to support field staff working in high pressure situations.

### Location:

Our Main Office is in the Kirkhill Industrial estate in Dyce, Aberdeen.
