

### Test & Qualification Engineer

Founded in 1987, Metrol are global leaders in the innovation, development and operation of wireless downhole systems.

Our main office is located in the Kirkhill Industrial Estate in Dyce, but operations are global, and we have offices in Dubai, the United States and other worldwide locations.

We deliver excellence in innovation and performance by caring about our relationships – both with our team and our clients.

With a family business culture, we aim to create and provide a working environment that promotes from within, encourages training and development and allows and trusts individuals to maintain a work-life balance.

### Benefits:

The role comes with a competitive salary and benefits package including:

- Culture that promotes teamwork and empowering individuals to make a difference
- Challenging role with on-the job training. Working as part of an expert team
- Further education opportunities
- 33 days holiday with additional holidays for long service and long service awards
- Hybrid/Flexible working opportunities
- Company Pension contributions
- Private Healthcare and Life Insurance
- Cycle to work scheme

### The Role:

To support our expanding R&D team, we are looking to recruit a Test & Qualification Engineer.

### Main Duties:

- Develop and carry out testing of Metrol tools to satisfy client and industry standard qualification requirements.
- Definition of qualification plans and suitable tests, running and maintenance of tests, analysis of data and production of reports and other related documentation.
- Development of qualification procedures for components and subsystems used in Metrol downhole tools, assembly of test hardware and documentation of test procedures.
- Work closely with Metrol's qualification staff and the Electronics R&D group to improve the reliability and performance of Metrol products.
- Additional electronics design and technician work for Metrol equipment as required.
- Maintain high standard of personal safety in the workplace, advise safety & senior staff of hazards, potential hazards & incidents, reporting as required
- Attend training courses as requested by the company.
- Maintain a high standard of personal safety in the workplace observing all company QHSE requirements and obligations.
- Any other duties that may reasonably be requested by the company.

### Required Skills & Experience:

- Previous experience in an offshore or a Test & Qualification environment.
- Knowledge of electronic components or design.
- 2-3 years industry experience as an electronics or test engineer.
- Initiative and ability to work to a tight schedule.
- Experience setting up test equipment.
- Good report and procedure writing.

**Location:**

Our Main Office is in the Kirkhill Industrial estate in Dyce, Aberdeen.
