

Project Controls Engineer

The Projects Controls Engineer will be tasked with implementing new project control methods, including technical and commercial processes, and promote improved project planning and budgetary discipline across the business.

The Project Controls Engineer will support the business by compiling, analysing, and reporting on cost and technical data relating to the delivery of our products, services, and projects, working to strict schedules, while maintaining accurate records and good communication. The successful candidate will be part of a busy Operations Team and will interface with a number of key departments focused on delivering exceptional service to our clients.

Full time equivalent hours (FTE) for this role is 37.5 hours per week.

Principal Duties

The Project Controls Engineer will be required to:

- Use data management skills and software expertise to search, analyse and present technical and cost information in relation to operational products, services, and projects
- Compile cost data for intercompany billing and recharges
- Assist with compilation and review of technical equipment required to deliver project
- Perform end of project cost reporting and analysis
- Perform cost estimates for product manufacture and delivery
- Assist the sales and commercial teams in performing cost and pricing reviews
- Actively participate in continual process improvement

Required Knowledge & Experience

- Degree qualification or equivalent professional qualification in relevant education
- Minimum three years' experience in a similar role
- Experienced in compiling, analysing, and presenting technical and pricing data
- Experienced in operating and interacting with business management database applications
- Highly competent at extracting and compiling data from purchasing, manufacturing, and project management database systems, such as ERP
- Excellent analytical skills particularly surrounding the gathering and interpretation of cost data
- Excellent communication and reporting skills
- PC literate, particularly the use of Microsoft Office software, good Excel skills essential
- Ideally experienced in working within a manufacturing, servicing, and project-based technology company
- Ideally able to understand bills of materials
